

INDEXEN

INDEX VAN DIERENNAMEN

Alle opgenomen wetenschappelijke en Nederlandse namen van diersoorten en hogere systematische categorieën zijn geïndexeerd. De libellensoorten kunnen zowel op de (onder-)soortnaam, als op de genusnaam gezocht worden. De andere soorten staan alleen op de genusnaam gealfabetiseerd. Grote cijfers verwijzen naar de bespreking van de soort, waar ook kleurenillustraties te vinden zijn. Synoniemen zijn gecursiveerd.

The index lists both scientific and vernacular names of animal species and higher systematic categories that occur in this book. Species of dragonflies can be found both on their generic or species names. Larger figures refer to the main treatment of the species, where also colour illustrations can be found.

GEOGRAFISCHE NAMEN

Hieronder volgt de index van in dit boek gebruikte Nederlandse geografische namen. Van elke locatie wordt tevens het atlasbloknummer aangegeven (zie figuur 1). De eerste twee cijfers geven het nummer van het kaartblad, de laatste twee cijfers geven aan in welk atlasblok (5 × 5 km) binnen dit kaartblad de plek is gelegen (zie figuur 2).

An index to the Dutch topographical names used in this book is given below. The approximate whereabouts of these localities are given between square brackets and can be found using figures 1 and 2. The first two figures refer to the sheet number (cf. figure 1), the last two figures refer to the 5 × 5 km square within that sheet (cf. figure 2).
