

***ERRATUM***

In: Robinson J.A., Chivers L.S. & Hamer K.C. 2001. A Comparison of Arctic Tern *Sterna paradisaea* and Common Tern *S. hirundo* nest-site characteristics on Coquet Island, north-east England. *Atlantic Seabirds* 3(2): 49-58, figure 1 was not reproduced properly. The light grey shading did not differ from the background. Therefore the nest-sites outside of managed plots were not visible. However, these sites are the irregular shaped polygons along the coast, e.g. the L-shaped polygon on the south-east coast.
