

ON A SMALL DRAGONFLY COLLECTION
FROM SLOVENIA IN THE DEPARTMENT OF
BIOLOGY, UNIVERSITY OF MARIBOR

The collection includes 47 specimens, referable to 14 species, collected incidentally during 1984-1989, mostly at the Komarnik Pond (Lenart-v-Slovenskih-goricah, E. Slovenia) and preserved in alcohol. Since very little is known on the odonate fauna of eastern Slovenia, the collection is brought on record here.
